Flipped Librarian Orientation <http://libguides.gvltec.edu/flipped>

"Of these two parts of the learning process—the transfer of information and the assimilation of that information, to use Eric Mazur's terms—it is the second part that is more challenging for students. Why not have them engage in that part of the process during class when everyone in the learning community (peers and instructors) are available to assist? Students don't need to be physically in each other's presence for the first stage, but they really benefit from the feedback and collaboration that the learning community provides during that second stage." (Bruff, 2012)
